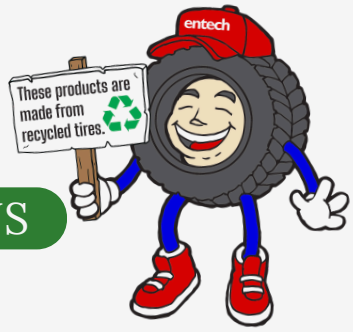
TREE RING

FREQUENTLY ASKED QUESTIONS



What makes EcoBorder Tree Rings different from other tree rings?

Unlike many traditional tree rings that include solid root-killing mats (which can harm tree roots), EcoBorder's design has no such mat. This allows you to add natural mulch inside the ring, providing benefits like moisture retention, weed suppression, and better root health.

What size is the tree ring, and can I make a larger circle?

The kit creates a 36-inch inner diameter circle (using 3 interlocking pieces). No, the pieces are molded specifically to fit a 36-inch inner diameter. They cannot be combined to make a larger circle.

Is installation difficult? Does it require digging?

No digging is required—it's a no-dig product. Key steps include:

- Clear grass/weeds/debris around the tree.
- Assemble the pre-shaped pieces into a circle (they fit together with overlapping flaps for structure).
- Secure with included stakes hammered through pre-drilled holes into the ground.
- Optionally add mulch inside. Tools needed are minimal (e.g., a mallet/hammer), and it can often be done in under 30 minutes.

Is installation difficult? Does it require digging?

It's made from 100% recycled rubber (saving tires from landfills—each ring saves roughly 1.25 tires). It's durable and withstands weather elements.

Is it safe for lawn maintenance?

Yes, it features a signature lawnmower- and weed-eater (string trimmer)-safe edge, so you can mow right over it without damage or needing to trim carefully around it.

Can I add mulch or other ground cover?

Absolutely—this is a key benefit. Fill the interior with natural wood mulch, rubber mulch, or other covers to retain moisture, prevent weeds, and enhance appearance.

How do I clean or maintain it?

Clean with water and mild soap if dirty. Periodically check stakes for security and replenish mulch as needed.
