LUTRON

LED+™

LED Bulb Compatibility

Not all LEDs are designed the same. That is why Lutron offers a mobile-friendly web tool to help you select the best bulbs for Lutron dimmers.

What makes a good LED?

Flicker-Free

A quality LED delivers flicker-free, steady illumination for comfortable, strain-free lighting.

Wide Dimming Range

A quality LED delivers smooth, wide-range dimming, from bright to soft glow, for perfect lighting control and ambiance.

Noise Free

A quality LED stays silent when dimmed, avoiding the hum or buzz from poor driver design.

These three criteria are shown for all bulbs on Lutron's LED Compatibility Tool
