Please check the following content about how to clean, maintain and repair solid surface bathroom products:

1. DAILY CLEANING

Solid surface product is hardly to gather dirt on surface and it is easy to clean and maintain, lt is recommended to clean any kind of dirt as soon as to keep the product in its best condition.

Daily cleaning only use a wet cloth with dish detergent or shower gel,please wipe the water with a towel in time as far as possible to keep the surface dry. The smooth and porous structure of surface prevents bacteria growing, and if disinfection is required, the surface can be wiped with diluted daily bleach or use other disinfectant potions.

2. RESISTANT STAINS CLEANING

Some stains such as cosmetics, coffee stains, tea stains, red wine stains,water furring etc.which stay on the surface for a long time that may became resistant stains,when the stains can not clear off by using wet cloth,we may think about to make a deeper decontamination, its step depends on the surface :

*Matte surface: Flush water to the place where need to clean,to make cleaning in circle movement with grey scouring pad and standard dish detergent or shower gel, then wash and wipe with a dry towel.

*Glossy surface: Flush water to the place where need to clean, to make cleaning in circle movement with sponge and standard dish detergent or shower gel, dirt which is difficult to remove that can be polished with 1200 water sanding pape rand then wiped with a soft cloth and pledge cleaner.
