Before You Begin Pairing

SKUs: UNSK-6MZSK, GMSK-H6MZSK

- [ ] **All existing, working keys and remotes must be present** during the pairing process. Once you pair a new remote, all previous remotes will be erased from the memory. The others will not be functional until you pair them again at the same time.
- [ ] Your vehicle **battery should be in good condition and fully charged** prior to pairing the new key. Turn off headlights, radio, A/C fan, etc. to minimize battery draw during the 10-minute process.
- [ ] **Do not use the programmer while the vehicle is in motion**. Unplug it from the OBD port before driving the vehicle.
- [ ] **Only original remote features will work**, regardless of buttons included on the Simple Key. This key does not add remote features that your vehicle did not have before.
- [ ] This **product may not work properly if there are aftermarket electronics installed** on the vehicle like a security system or stereo.
- [ ] Familiarize yourself with the location and placement of the key in the pairing slot. **locate the pairing slot for your vehicle** by reading the owner's manual along with following the instructions provided.
- [ ] Before pairing, confirm the remote's compatibility with your vehicle's make, model, and year on the Car Keys Express website or by following the QR code.
- [ ] Familiarize yourself with the pairing process before proceeding. The process needs to be completed at a consistent and even pace.
