nature's way FARMS®

When given the right dose of care and attention, these green companions can truly thrive in the most delightful ways.

fern

light

Thrives in medium to bright indirect light. Avoid direct sunlight, which can scorch the leaves.

water

Keep the soil consistently moist but not soggy. Water around the soil and avoid pouring water directly into the center.

fertilize

Feed with a balanced, water-soluble fertilizer during the growing season (spring and summer).

Ferns are ancient plants known for their delicate, feathery fronds and ability to thrive in humid, shaded environments.
