

Care and Cleaning of AcrylX™ Shower Units

AcrylX™ applied acrylic exhibit a glossy finish. These products should be protected through the installation process by applying part of the cardboard packaging to the bottom area. Please use caution with tools, boots, and handling of the unit.

Please follow the suggested cleaning procedures below:

- Abrasive cleaners (this would include Soft Scrub) should never be used on these products; scratches and a dull finish can be the result to the surface.
- Warm soapy water-dishwashing liquids are the safest products to use.

For more difficult cleaning such as plaster, sheet rock mud, etc... apply warm soapy water until the foreign material dissolves or becomes loose. Rinse immediately.

Periodic polishing or waxing with an automotive wax will help to preserve the finish and deter any soap and body oil build-up. This should be done every three months. **Do not wax the floor area of the unit.**

Please follow all cleaning recommendations to insure a lasting glossy finish for AcrylX™ products.
