About ClosetMaid®

Since 1965, ClosetMaid® has been the leader in the wire storage solutions for every room in the home.

Consumers worldwide choose ClosetMaid® wire shelving for many reasons:

- Quickly and easily doubles or triples closet storage space
- Wire shelving allows air to circulate; keeping clothing fresh
- Products are made from strong extruded steel wire for maximum strength
- Shelving is coated with a tough durable vinyl and resists rusting, discoloration, fading and chipping
- Shelving is easy to install

About Our Shelving

ClosetMaid Wire Shelving is vinyl coated for best durability and performance.

There are 4 types of shelving – Low Profile SuperSlide®
Shelf & Rod
Close Mesh
TotalSlide®

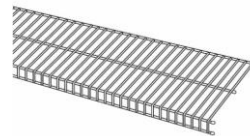

- **SuperSlide®** is a dual purpose shelf. It serves as a storage shelf or becomes a hanging shelf when SuperSlide closet rod and hardware are added to the shelf. The SuperSlide closet rod system allows hangers to slide along the closet rod without interruption.

- **Shelf & Rod** has a built in hang rod and is an economical solution for hanging.

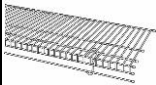

- **Close Mesh** shelving has closer 5/8 inch spacing between wires so it's ideal for pantry storage to keep small items from tipping over or falling through the wires.

- **TotalSlide®** comes with a built-in hang rod and allows for uninterrupted sliding of hangers.

Fixed Mount Installation System

There are 2 ways to mount a shelf to the wall – ShelfTrack® and Fixed Mount.

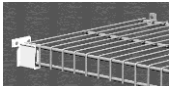

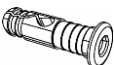

Fixed Mount is an economical but permanent installation system.

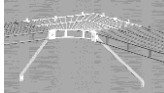

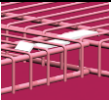

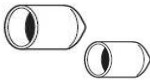

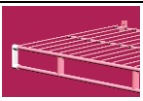

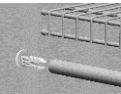

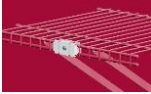

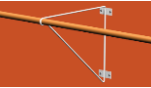

- The system includes back clips which anchor the shelf to the back wall and are placed 12 inches apart.
- For installations involving side walls, end brackets are used to support the shelf.
- Support Brackets support the shelf at an angle and are placed every 3 feet.
- Shelf end caps protect the sharp ends of the shelving and provide a more finished installation.

ShelfTrack® Adjustable Mount Installation

The second way to mount ClosetMaid® Shelving to the wall is ShelfTrack®.

The ShelfTrack® system is adjustable so you can reposition your shelves if your needs change.

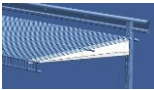

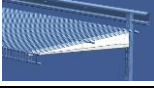

The system consists of a horizontal hang track that is first mounted to the back wall.

- The hang track is a key component, in that it saves time by requiring leveling only once during the installation.
- When the hang track is in place, the vertical standards are hung from the track, the brackets are inserted into the notches of the standards and the shelf can be snapped into place.
