

# EASY CARE & CLEANING INSTRUCTIONS

Read below for pro tips on how to care for your beautiful, high-pile area rug

## Spot Clean

When stains or spills occur, blot the area immediately with a clean cloth until moisture is removed. Use carpet cleaner as needed to treat the stain. Dab the spot with a clean dry cloth until moisture is removed. Allow to air dry thoroughly before walking on the area.

## Vacuum The Backing

For a deep vacuum clean, flip your area rug upside-down on clean flooring and begin vacuuming the back of the rug with the vacuum's beater bar setting ON. The pressure and vibration will help to shake dust, debris, and shedding loose to the floor beneath. Next, lift the rug from the space and continue to vacuum the fallen debris from the floor. Place rug back into its original location and vacuum the top fibers (instructions continued in "Vacuum The Top").

## Vacuum The Top

To continue with a deep vacuum clean, turn vacuum's beater bar setting OFF and begin vacuuming the top fibers for your area rug. This will provide a light suction, cleaning up all remaining dust, dirt, and debris. Vacuuming regularly will help to refresh all fibers in your high-pile rug and should occur often for optimal plushness and comfort underfoot. Pro Tip: Do not use the vacuum's beater bar setting when vacuuming high-pile, shag, or natural fiber area rugs – this can cause damage, tangles, and/or pull fibers from your area rug.

## Professional Clean Optional

This area rug may require professional cleaning to refresh and deep clean all fibers. Please contact your nearest dry cleaners or home improvement store for more information.

## Rug Pad Recommended

Use of a rug pad is recommended with this area rug. Rug pads can help prevent slipping and sliding on hard surfaces while providing extra comfort underfoot. Please note: all rug pads are sold separately.
