Ceramic Sink

USE & CARE INSTRUCTIONS

CARE AND MAINTENANCE

- ✓ Rub lightly with a soft cloth on a regular basis and clean periodically by thoroughly rinsing with mild soap and warm water for additional preventative cleaning.
- ✓ Check regularly for cracks. To check for cracks, you can fill a basin with water and pour in colored paint to soak overnight. If there is a change in the water level, there may be cracks.
- ✓ If your sink develops any type of discoloration, using a mild abrasive, such as baking soda, will have your sink looking brand new again.
- ✓ Remove and clean the drains regularly to prevent stubborn stains.

CLEAN SINK WITH
MILD ABRASIVE

NEVER

- ✗ Do not use harsh, abrasive cleaners or chemicals.
- ✗ Avoid steel wool or metal cleaning pads on the sink.
- ✗ Avoid leaving household cleaners or bleach in the sink for a long time, as they may ruin the finish of your sink.
- ✗ Avoid dropping heavy or sharp objects from a height into the basin.
- ✗ Avoid large friction with other ceramic surfaces during use, as it will abrade the glaze and cause breakage in appearance, affecting the overall decoration.
- ✗ Avoid excessive temperature differences that may cause the sink to break.
