

 An environmentally responsible alternative to 1500W heaters.

 No professional installation is required, easy Do-it-yourself.

 Less than an inch thick and can be mounted on the wall or used on the floor with Wexstar optional Stand Support. Portable and easy to relocate.

 Plugs to a standard electrical outlet (120V).

 **NO DUST** circulation, great for asthma or allergy users.

 **NO NOISE.** The heaters are 100% quiet as they don't use a fan to heat the room.

 **Durable & Safe.** No maintenance or service required.

CONVENTIONAL VS WEXSTAR INFRARED TECHNOLOGY

Conventional heaters mainly heat the surrounding air, resulting in high air ventilation. The hot air will stay at the ceiling and the heat will be distributed unevenly.

Using the same principle as the sun, WEXSTAR infrared heaters use Infrared rays which are gently distributed uniformly across the room and absorbed by objects and walls that release the heat back into the room. This creates an overall pleasant feeling of warmth.

All WEXSTAR products comply with US and Canadian certifications.

Can be used for residential, commercial or industrial applications.
