

Product care & maintenance

While most hand sanitizing dispenser stations are likely installed indoors out of the weather elements, if product is installed or used outdoors in areas that expose the product to road salt from snow/ice removal this can be very damaging to the powder coat painted metal surface. Also locations near the ocean expose the surface to salt air which is highly corrosive. Pollution from automobiles, acid rain, and polluted air in general will also damage the painted surface. A periodic cleaning of the painted surface of your product with a mild detergent, water and soft brush will help keep your product lasting for many years. In addition a clear spray (no buff) car wax can help protect the painted finish. This process is recommended 2-3 times a year if possible. This quick maintenance will help your steel hand sanitizer station last for many years to come.
