

Columbia offers PureBond® formaldehyde-free hardwood plywood products that can be used with confidence in all your furniture, cabinetry and wall paneling projects.

 **PureBond**®  
FORMALDEHYDE-FREE TECHNOLOGY

Now there's a cost-effective way to get decorative hardwood plywood without the toxic formaldehyde.

PureBond® is Columbia Forest Products' exclusive formaldehyde-free innovation for hardwood plywood manufacturing.

Replacing traditional urea formaldehyde (UF) hardwood plywood construction with our new environmentally safe PureBond technology enables Columbia to eliminate formaldehyde from standard veneer-core construction. This virtually eliminates formaldehyde off-gassing from the finished cabinetry, improving your home's indoor air quality. That's good news for our customers and the environment.

## **NOTE:**

**Panels in this program comply with the new California Air Resources Board (CARB) regulations for formaldehyde emissions.**

**This is critical to your customers who ship products into California and anyone concerned about indoor air quality.**

**Columbia's Veneer Core Hardwood Plywood meets CARB Phase 2 < 0.05 ppm**
