

Garden Hose Holder Installation Guide

1. Unpacking

Upon receiving the Gayuteay garden hose holder, carefully unpack the package. Ensure that all components are included, which should consist of the hose holder frame with 4 spikes, and potentially some additional small parts if any. Check for any signs of damage during transit.

2. Selecting the Installation Location

Choose an appropriate outdoor location for the hose holder. Ideal spots include front yards, back yards, near lawns, gardens, flower beds, vegetable plots, or courtyards. Make sure the area is flat and free from obstacles. Consider the location of your water source and the areas where you typically use the hose to ensure convenient access. Avoid placing it in areas with excessive sunlight exposure if you want to further protect your hose from sun damage, taking advantage of the holder's detachable and adjustable design.

3. Assembling the Hose Holder

Take the hose holder frame. Notice the 4 strengthened anchor points, which are the spikes.

- . Align each spike with the corresponding holes or attachment points on the base of the hose holder frame. Make sure they fit snugly.
- . Gently push or use a rubber mallet (if necessary) to firmly attach the spikes to the frame. Ensure that all 4 spikes are securely in place, as the 4 - anchor design is crucial for the stability and strength of the holder, allowing it to support a 150FT water hose while remaining upright and resisting bending or breaking.

4. Installing the Hose Holder

- . Once the hose holder is fully assembled, position it at the pre - selected location.
- . Push the spikes firmly into the ground. If the ground is hard, you may need to use a tool like a hammer to drive the spikes in. Make sure the hose holder is upright and stable. The heavy - duty steel construction, with its powder - coated finish from the electrostatic spraying process, ensures that the holder can withstand the force of being installed and will not rust, corrode, or be affected by water, thus having a long service life.

5. After - installation Checks

- . After installation, give the hose holder a gentle shake to ensure it is firmly planted in the ground and stable.

If you plan to use it immediately, you can start coiling your garden hose around the holder. If not, simply leave it in place until needed. Remember, when not in use, the hose holder is detachable and easy to disassemble for storage, taking up minimal space in your yard or other outdoor areas.

6. Contact Information

If you encounter any difficulties during the installation process, or if you have any questions or concerns about the product at any time, please do not hesitate to contact our customer service directly. We are here to assist you and ensure your satisfaction with the Gayuteay garden hose holder.
