

8OZ Stubby and ounce claw hammer manual

Material: 45 carbon steel + TPR handle; Length 165mm

Claw hammer shaped like a claw.

It can fix, move, drive and deform the nail. Also it can knock the object.

Please keep the hammer in the dry environment. If must work in the damp environment, please accelerate the operation speed, reduce the working hours, to avoid more corrosive and dangerous. After using, please wipe clean it, and Store it in the dry area.

Using the method of claw hammer

(1) First step knock the nail straight into the wood, no oblique, otherwise nail will bend.

(2) Second step knock the mail into the wood lightly, when the nail in a certain depth, then hammer a nail, which can avoid the nail body bending.

(3) In the hardwood, please drill the small hole on the wood, before hammer, which can avoid the nail body bending.

(4) This magnetic hammer can suck a nail when using.
