CONCRETE FOUNDATION

If you choose to install your kit on a concrete slab refer to the diagram below. Attach the sill plates on the foundation as shown, and continue on to page 11.

Building Size	Actual Floor Size	A	B	C	D
10'x8' (304,8 x 304,8 cm)	10'x8' (304,8 x 304,8 cm)	120" (304,8 cm)	89" (226,1 cm)	96" (243,8 cm)	153-11/16" (476,1 cm)

10' x 8' Building Requires:

- ☐ x2 2 x 4 x 10' (5,1 x 10,2 x 304,8 cm) ☐ x2 2 x 4 x 8' (5,1 x 10,2 x 304,8 cm)
 Cut down to: 89" (226,1 cm)
- ☐ x1 Caulk

! Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4" (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete.
Purchase full length treated lumber, or butt shorter pieces end-to-end and seal seams with caulk.
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4" (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (fasteners not included).
- Check local code for concrete foundation requirements.

OPTIONAL WOOD FRAME FLOOR LEVELING OPTIONS

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.

Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS

Runners are generally 12" (30,5 cm) from ends of floor frame and under seams.

- 3" Screws angled into 4x4.
- (2) at each point frame and 4x4 touch.

FLOOR FRAME NOT INCLUDED

MATERIAL REQUIRED:

☐ 10' x 8' ☐ x3 4 x 4 x 8' (10,2 x 10,2 x 304,8 cm) Treated Lumber

Fasteners for Frame to 4x4:
(3" Screws shown as one option.)
Minimum 3" screws / exterior grade.

☐ x42  3" (7,6 cm)

Use only wood treated for ground contact and fasteners approved for use with treated wood.

Always support frame seams.

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- ☐ Gravel
- ☐ Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- ☐ 2x4 Treated Lumber
- ☐ Asphalt Shingles

Leveling higher than 16" not recommended.

LEVELING & SQUARING THE FLOOR FRAME (Not Included)

STOP!

LEVEL AND SQUARE FLOOR FRAME

STOP!

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed.

See page 9 for the preferred floor leveling method.

✓ **BEGIN** Use a level and ensure the frame is level before applying floor panels.

- 1 Check for frame squareness by measuring diagonally across the corners.
If the measurements are the same, the frame is square.
 - The diagonal measurement for the 10' x 8' frame will be approximately **153-11/16"** (387,8 cm) .
- 2 After the frame is level and square, secure one side of frame to 4x4 runners using one fastener at ends of each runner. At the opposite end of the frame, secure the frame to 4x4 runners with one fastener at the ends of each runner, ensuring that the frame remains square.
Fasten the frame to the 4x4 runners with (2) 3" screws at each connection **(Fig. A)**.

4x4 runners are generally installed 12" (30,5 cm) from ends of floor frame and under any seams.

First, secure at ends with one fastener.

Your floor frame is now level.

! IMPORTANT!

STOP!

Ensure the floor frame is level after installing floor panels. Re-level if needed.

HINT:

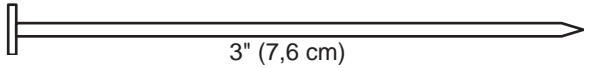

- The floor should be used as a stable work surface for wall construction.
- Organize your assembly procedure during the build process to avoid over-handling of the walls.
