

STONEWALLED™ SEALER

NEXT GENERATION PENETRATING SEALER FOR POROUS MINERAL SURFACES

Surface Solutions is dedicated to protecting architectural surfaces. Our proprietary water-based treatment, Stonewalled™ protects against a majority of water and oil based contaminants such as: gum, bird droppings, uric acid, motor oil and other substances which cause severe stains are expensive to remove or cause permanent damage.

Stonewalled™ is a water based, ZERO VOCare, urban surface treatment for porous mineral surfaces. Stonewalled™ is invisible and does not change the surface friction or feel. Once applied, it transforms porous mineral substrates into hydrophobic and oleo phobic surfaces that repel water, oil-based contaminants and other stains. Stonewalled™ will give the surface non-stick properties, inhibiting the chemical bonding and absorption of pollutants. It also protects mineral walls from graffiti and inhibits paint penetration into the surface.

Treatable Surfaces:

- Stone
- Travertine
- Concrete
- Masonry
- Marble
- Limestone
- Granite
- Brick
- Pavers
- Grout and More

BENEFITS OF THE STONEWALLED™ TREATMENT

- **Reduced cleaning expenses;** shorter cleaning time and frequency.
- **Full breathability of treated surfaces.** Reduced efflorescence.
- **Reduced cost of application;** One application vs. competitors multiple applications.
- **Ultra repellant surface;** effectively repels: Water, salt, oil, chewing gum and much more. Proper care and maintenance will have reduced staining from contaminants.
- **Chewing Gum Removal;** gum easily removed with light pressure washing or floor scrubbers without residual staining or marks.
- **No change in slip resistant properties;** Nano-technology is non film-forming. Treated surfaces will maintain slip resistance.
- **Surfaces may be treated with Stonewalled™** to enhance Coefficient of Friction (COF) and treated with Stonewalled™ while maintaining full properties of both treatments.
- **Easy Ice and Snow Removal;** Ice and snow formation begins on top of the surface rather than penetrating into the concrete or stone. Due to lower absorption, less melting salt and time is needed.
- **Surface Protection;** Due to lower absorption from acid rain, smog, salt and the freeze/thaw cycle; surfaces treated with Stonewalled™ should last longer with reduced costs from cracks and fissures.
- **Longevity;** maintains the longest warranty in the industry for penetrating surface treatments. With only one application needed for initial installations and limited need for Stonewalled™ revitalizing treatment periodically, the initial investment is quickly recovered.
