

Register Installation Instructions and Tips

Step 1 - Measure the opening over which the register needs to be installed. For rectangular openings measure the width and height of the opening in inches. For square openings, measure one of the sides in inches.

Step 2 - Open the Register package and locate the screws included in the package.

Step 3 - Place the front facing register against the wall/ceiling and ensure that screw holes line up with the holes in the wall.

Step 4 - Using a screwdriver, install the screws through the register into the wall. Tighten the screw to fix the register firmly into the wall.

Caution: Do not OVERTIGHTEN the screws to avoid bending or breaking of the product.

Step 5 - Locate the Damper handle and open it or close it for the desired air flow.
