

LATTICE INSTALLATION GUIDE

1. We recommend 2 people to handle lattice when hanging.
2. Begin by predrilling oversized hole to your lattice with no more than a 24" distance between each hole.
3. Position lattice to adhere to desired structure.
4. Attach lattice by loosely drilling screws to and through lattice to adhere to structure, leaving at least a 1/8" gap between adjoining lattice to allow for expansion.
5. When all lattice is hung and desired placement is achieved, go back and tighten all screws to secure permanently.
6. If bowing occurs – you have not allowed enough room between pieces and need to adjust.

We recommend using self-tapping screw.

Do not use countersunk screws.
