

How To Measure Your Windows And How To Choose Your Shades

- Decide to install the shade with inside mount or outside mount.
- Use a metal tape

Inside Mount

- **Width** - Take 3 measurements, including top, center, and bottom. Order the shade width $\frac{1}{4}$ " ~ $\frac{1}{2}$ " smaller than the narrowest measurement.
- **Height** - Measure the window height.
 - If the height is smaller or equal to **48"**, please order a shade with **48"H**.
 - If the height is smaller or equal to **72"**, please order a shade with **72"H**.

Outside Mount

- **Width** - Measure the exact width of the area to be covered. The overlap is usually 1.5~2" on each side.
- **Height** - Measure the height that to be covered, including the desired overlap.
 - If the height is smaller or equal to **48"**, please order a shade with **48"H**.
 - If the height is smaller or equal to **72"**, please order a shade with **72"H**.

The shade width will be exactly the width you ordered. No additional deduction.
The shade heights are available in 2 options, 48" and 72".
