

Use and Care Manual

Installation: Follow the installation instructions provided with the installation steps.

Use: Stand in the position where you need to weed, hold the weeder extractor, and make sure the handle is comfortable to hold. Aim the three-prong part of the puller at the target weed and press down hard enough to penetrate the soil and grab the root of the weed. Gently rotate the handle to pull weeds out of the soil. Repeat the above steps until you have finished weeding the entire garden.

Clean: After use, rinse the weeder extractor with clean water to remove dirt and weeds. Avoid using chemical cleaners or corrosive substances.

Check: Check regularly whether the claw of the puller is in good condition. If it is damaged or worn, replace it in time. At the same time, check whether the handle and connection part are firm, if loose or damaged, please repair or replace immediately.

Storage: When storing, please hang the extractor on the hook to avoid being squeezed or damaged. Ensure that the storage environment is dry and well-ventilated to avoid moisture and corrosion.
