WINDOW TREATMENT MEASURING TIPS

- When measuring the length of your windows, start from the top of your curtain rod and measure to the floor.
- The most common placement for rods is 4" above the window frame.
- Select a curtain rod that is wider than the width of your window. Go 8"-12" wider than your window.

WIDTH	NUMBER OF PANELS NEEDED
30"-39"	2 PANELS
40"-48"	2-3 PANELS
49"-72"	3-4 PANELS
73"-96"	4-5 PANELS
97"-120"	5-6 PANELS
121"-144"	6-7 PANELS

- To ensure panels have ample room for drapery when closed, they should have a combined width that is 2 to 2½ times the width of the window.
- For a dramatic look, curtains should puddle on the floor. Ideally, an additional 2-3" of fabric after hitting the floor.
- Many windows aren't standard sizes, window treatments can be tailored — either professionally or via tutorial.
