

Cleaning: Use a mild detergent on a damp cloth, avoiding the use of abrasive cleaners, scouring pad, and excessive water. After cleaning, the products should be dried off using a soft towel to prevent damage to the product. Move furniture during floor mopping to prevent frequent contact with floor cleaning chemicals.

Scratches: scratches are essentially caused by contact of a harder material against a softer material. The same quality that makes wood so easily restorable and renewable, also makes it easier to scratch. In general, if hairline scratches bother you greatly, strive to always lift your items to move them instead of dragging.

please never scrub your table. Scrubbing is basically sanding, and will remove the finish on your table, exposing the raw material.

Environment: keep it stable, keep it cool. Strictly no direct sun or rain exposure.
