

CARE FOR YOUR PLANT

Simple Easy Steps

1

Upon arrival remove your plants from their packaging immediately. Post transit, they will need a drink and some sunlight, and likely some loose soil gently brushed off their leaves.

2

When choosing a place for your new plant you want to consider light and air flow, both are important.

3

Avoid direct sunlight and full shade, and opt for reflected light or soft filtered sun with plenty of air flow.

4

When watering your plant, be careful not to overwater in the cooler months and aim for a thorough water every 1-2 weeks.
