FREEZE PROTECTION TECHNOLOGY

Freeze Miser®
OUTDOOR FAUCET FREEZE PROTECTOR

EASY TO INSTALL

Hand-tighten the **Freeze Miser®** on to an outdoor faucet or hose.

Turn the water supply valve to a fully open position. A minimum of 10 psi water pressure is required.

If placing on a hose (150 feet or less) - Keep the **Freeze Miser®** off the ground. This will ensure the **Freeze Miser®** only senses the temperature of the water in the hose.

Sealing Square O-Ring between Freeze Miser and the faucet.

Cold Impact Resistant Polypropylene

Water Release Port

O-Ring

Stainless Steel Valve Rod

Sturdy Brass Power Element

Nylon Washers

Stainless Steel Spring

Thermal Wax - Shrinks when frozen and expands when it thaws. Instant sensation of water temperature.

O-Ring

Stainless Steel Fill Plug

Water discharges from here

HOW IT WORKS

Unlike winter faucet covers or the drip method, the **ENGINEERING** of the Freeze Miser® releases **ONLY** the minimal amount of water to **PREVENT** faucets from freezing. Its patented design allows the Freeze Miser® to sense the internal water temperature, **ALLOWING NO WATER** to drip until the **WATER TEMPERATURE** drops below 37°F/3°C. Meaning **BETTER FAUCET FREEZE PROTECTION** using the least amount of water, even in the most **EXTREME FREEZING CONDITIONS**.

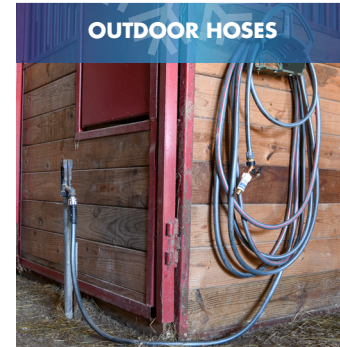

OUR MISSION

At Blue Penguin®, we **MAKE FREEZE PREVENTION** more **DEPENDABLE**, **AFFORDABLE**, and **WATER CONSERVATION** a reality. We dedicated over 6 years to developing, engineering, and testing to deliver a faucet freeze protector that **TRULY WORKS**. The Freeze Miser® is backed with **17+ YEARS EXPERIENCE** in manufacturing proprietary temperature-activated, ice-prevention valves currently used in the cattle and dairy industry.
