

NOTE:

1. For best performance of the table top patio heater, it is recommended to supply the heater with a 20lbs tank of Propane with a extended hose (length: 4.5ft).

- 2 This table top patio heater will also work with a 1lb propane tank with limited performance. Each 1lb tank will last for about 25mins before it freeze. Tank freezes because the burning process draws heat from the propane tank at a faster rate than a 1lb tank of propane can supply. This is not a defect.
