

General Care

- Environment
 - If your sofa is exposed to sunlight for a long period of time, for example in a conservatory or a sunny bay window, its color may fade and the fabric may deteriorate. Heat from radiators may have the same effect so allow for a bit of space between the two.
- Legs
 - Use a damp cloth rinsed in warm water to clean the wooden legs of your sofa. Do not use detergent. You may wish to polish them occasionally with a natural wax.
- Frames
 - We pride ourselves on the quality and durability of our sofa, bed and chair frames so much so that they are covered for a lifetime. Our hardwood frames are made from European beech trees making them super tough and built to last.
