“Back of a Napkin”

If your house sketch plan is an idea that is not available in a native file, our unique NapkinCAD® solution will guide your design process. Simply sketch a dimensioned floor plan, four elevations (each of the four sides of the structure), the height of the walls of the structure, door and window sizes or styles, and the pitch of the roof. With our design consulting service and your sketch framing plan, we will design the perfect DIY steel frame plan for you.

Our **NapkinCAD®** technology produces a fully engineered, custom-manufactured cold-form steel skeleton (frame). Once you have the frame up, choose how you want to finish your exterior and interior to complete your dream home exactly the way you want it.

We supply a complete materials shopping list. Take your list to Home Depot to make your choices.
