

HOW TO INSTALL EZ-BAR:

1). Attach EZ Bar the entire length of the TOP of the picture frame. (EZ Bar is predrilled every 4" so you can screw the channel bar into the frame.)

2). Determine placement on the wall. Screw one side of EZ Bar into wall stud.

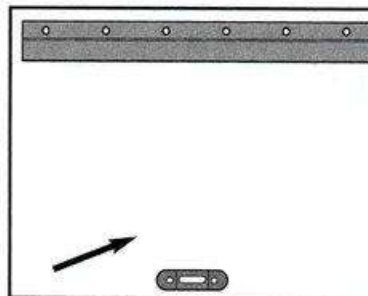

3). Using a line level to align bar for placement on wall, then screw the other side of EZ BAR into the wall stud. Wall anchors can be used in place of stud placement on smaller items, and for additional support on the larger, heavier items. Finish by placing drywall screws in each hole for support.

(Remember...the integrity of the EZ BAR is only as strong as the integrity of the screws into the wall!)

4). Hang the picture

Suggestion: Use Z-Hardware Security Locking Systems for even
