SAFETY FEATURE
A thermal overload protector is built in to prevent overheating. If an overheat temperature is reached, the Heater will automatically shut off. It can then resume operation when the user resets the unit.

RESET INSTRUCTIONS:
Unplug the Heater and wait 10 minutes for the Heater to cool down. After the Heater has cooled down, plug the unit into a 120VAC electrical outlet and follow the EZTouch™ Controls instructions described in this manual.

TROUBLE SHOOTING TIPS
If your heater shuts off unexpectedly or fails to operate, the previously mentioned safety feature may have been activated to prevent overheating (See Reset Instructions). Be sure the power cord is plugged into a working electrical outlet. Check your Temperature Settings. The Heater may be set too low for the desired room temperature. If you are not sure, set the temperature a few degrees higher. If your heater fails to restart after 30 minutes and shuts off repeatedly, your heater may require cleaning. See Maintenance Section below, or the EZTouch™ Filter Systems instructions described in this manual. If you have a problem that cannot be resolved by the steps listed above, contact Technical Assistance at 1-800-233-0268, Monday through Friday between the hours of 8 a.m. and 5 p.m. EST.
