

Specification

This outdoor air conditioner condenser cover adopts premium reinforced mesh fabric and detachable high density 600D Oxford fabric top panel. The mesh structure delivers effective ventilation and barrier performance, while the Oxford layer features waterproof, anti UV and weather resistant coatings. It is equipped with extended hook and loop straps, adjustable drawstrings and buckle fastening structures, and comes with a matching storage bag for flexible seasonal use.

Replacement Part List

The complete set includes one breathable reinforced mesh main cover, one detachable 600D waterproof Oxford top panel, multiple long side hook and loop straps, adjustable windproof drawstrings and buckles, and one dedicated storage bag. All functional components are fully assembled for direct use without extra replacement parts required.

Installation Guide

Place the mesh cover over the outdoor air conditioner condenser and align the cover with the unit outline. Fasten the extended side hook and loop straps to fix the main cover stably and reserve reasonable space for internal pipes and wires. Install the detachable Oxford top panel if needed, then tighten the bottom drawstrings and buckles to complete windproof installation.

Instructions / Assembly

Users can freely match the cover layers according to actual outdoor weather conditions, using only the mesh layer, only the top panel, or combining both layers. Ensure all fastening straps and buckles are securely locked to prevent the cover from fluttering in strong winds. Reserve gaps for pipeline and wire penetration to guarantee complete coverage without affecting normal equipment operation and ventilation.

Use and Care Manual

Regularly clean surface debris and dust on the mesh and Oxford fabric to maintain good air permeability and waterproof performance. Check the tightness of drawstrings, buckles and hook and loop straps frequently to avoid loosening caused by long term wind and sun exposure. When not in use, fold the cover neatly and store it in the matched storage bag for tidy preservation and repeated use.

Product Brochure

This multifunctional outdoor AC cover perfectly balances effective protection and smooth ventilation for outdoor condenser units. The dense mesh blocks fallen leaves, twigs and garden debris while ensuring efficient unit heat dissipation. The detachable 600D Oxford top resists rainwater, UV fading and aging. With windproof adjustable design and tool free installation, it provides durable seasonal protection for outdoor air conditioning equipment.
