

Installation Guide

Prepare the Site

Select a flat and open area. Avoid installing on uneven ground or near sharp objects that could damage the canopy. If on the beach, choose a spot away from the high - tide line.

Unpack the Canopy

Take out all components from the storage bag, including the canopy, 1.5mm - thick poles, and any additional accessories.

Insert the Poles

Hold the middle of each pole and firmly insert it vertically into the sand. Do not insert the poles at an angle to ensure stability. Rotate the poles gently during insertion for easier setup. There are multiple poles to support the 10x10 - foot canopy.

Expand and Secure

Gradually expand the canopy, connecting all parts according to the structure. Ensure that all joints between the poles and the canopy are tightly connected. Check that the canopy is fully open and evenly stretched.

Final Checks

Once installed, double - check that the canopy is stable and properly set

up. Make sure the poles are firmly in place and the fabric is not sagging or loose. The canopy is now ready for use.
