

Use and Care Manual

Assembly: After receiving the bird cage, please be sure to carefully check the packaging for any damage. To ensure smooth assembly, please ensure that all parts are complete. Please follow the instructions and assemble the bird cage step by step.

Putting the bird in: After assembly, carefully transfer your beloved bird to the new cage. Make sure the entrance size of the cage is appropriate and will not cause harm to the bird.

Adjust the feeding and drinking facilities: Adjust the location of the feed and water dish according to the habits and dietary needs of the birds to ensure easy access to food and water.

Cleaning: Clean the feed and water dishes daily to prevent accumulation of food residue and dirt. Thoroughly clean the interior and exterior surfaces of the bird cage once a week to ensure a hygienic environment. Use a soft, damp cloth to gently wipe the interior and exterior surfaces of the cage, avoiding the use of harsh chemical cleaning agents.

Check: Check the fastening of the birdcage and support frame once a month. If there is any loose or damaged part, please adjust or repair it in time.

Feed replacement: Regularly change the type and amount of food according to different types of birds. Too much or too little food can affect the health of the birds.

Environment: Keep the place where the bird cage is placed well ventilated, away from dust and pollution sources. Ensure air circulation and sufficient light, which is beneficial for the healthy growth of the birds.

Safety: Always pay attention to the safety of the birdcage. When not in use, be sure to close the door or lid of the birdcage to prevent the bird from flying out or coming into contact with dangerous objects.
