

Hand-Held Bulb Planter Instructions

Place a hand-held bulb planter on the soil where you want to plant a bulb. The bottom has serrated edges to dig into the soil and the top has a handle.

Press the bulb planter straight down into the soil to the depth needed. Use the depth gauge on the side marked in inches.

Twist the planter in either direction one-quarter turn. Lift the planter straight up and out of the soil. You'll see a soil plug inside the planter body.

Place your bulb in the hole with the round root side down and the pointy end facing up.

Hold the planter over the hole and squeeze the handle to deposit the soil inside into the planting hole. Tamp the soil down over the bulb.
