12

Feed motor lead wires through downrod/canopy assembly and insert downrod into downrod yoke. Make sure to align hole in downrod with the hole in downrod yoke. Install yoke cross pin (1) through yoke and downrod. Insert clamp pin (2) into cross pin until it snaps into place. Tighten set screws (3) in yoke.

Deslice los cables del motor a través de la varilla vertical/conjunto del dospel e inserte la varilla vertical en la horquilla de la misma. Asegúrese de que el agujero de la varilla vertical y el de la horquilla de la varilla vertical estén alineados. Instale el pasador transversal de la horquilla (1) pasándolo por la horquilla y la varilla vertical. Inserte el pasador de fijación (2) en el pasador transversal hasta que escuche un chasquido que indique que está en la posición adecuada. Ajuste los tornillos de fijación (3) en la horquilla.

12

**MOUNTING**  
**MONTAJE**

13

Carefully lift fan assembly onto mounting bracket. Rotate fan until notch on downrod ball (1) engages the ridge on the mounting bracket (2). This will allow for hands free wiring.

Levante con cuidado el conjunto del ventilador hasta que la muesca de la bola de la varilla vertical (1) enganche sobre la saliente del soporte de montaje (2). De este modo, tendrá las dos manos libres para hacer el cableado.

14

With bracket holding fan assembly, make electrical connections using the following step for wiring instructions.

Con el soporte de montaje sujetando el conjunto del ventilador, haga las conexiones eléctricas de acuerdo a las siguientes instrucciones de cableado.

13

## BLADE INSTALLATION

### INSTALACIÓN DE LAS PALETAS

Attach blade brackets to blades using the blade bracket screws (1) and fabric washers (2).

Fije los soportes para aletas a las aletas con el tornillo (1) y las arandelas de tela (2).

Check the motor for plastic shipping stabilizer tabs (1), and remove them if they are present. Attach blade assembly to motor using the noise-dampening motor gaskets (2) and motor screws provided. Tighten screws securely. NOTE: Some models do not utilize motor gaskets, washers, or stabilizer tabs.

Verifique si hay lengüetas plásticas de embalaje para sostener al motor (1) y desámelas. Fije el conjunto de las aletas al motor usando juntas reductoras de sonido del motor (2) y los tornillos para el motor incluidos. Apriete los tornillos asegurándolos. NOTA: Algunos modelos no utilizan juntas para el motor, arandelas o lengüetas de embalaje.

Assemble decorative fob and extension chains from hardware bag to fan pull chains by inserting end of chain into chain coupling. Confirm chains are held by lightly pulling both chains in coupling.

Conecte las cadenillas de tira con las piezas finales correspondientes a las cadenas del ventilador introduciendo el extremo de la cadenilla de tira a la pieza de unión. Asegúrese de que las cadenas estan bien sujetas, tirando ligeramente de ambas cadenas por la pieza de unión.

16

## OPERATION AND MAINTENANCE

### Operation

Turn on the power and check operation of fan. The pull chain controls the fan speeds as follows: 1 pull - high; 2 pulls - medium; 3 pulls - low; 4 pulls - off. Speed settings for warm or cool weather depend on factors such as room size, ceiling height, number of fans and so on. The slide switch controls direction, forward or reverse.

Warm weather/down position - (Forward) Fan turns counterclockwise direction. A downward air flow creates a cooling effect as shown in illustration A. This allows you to set your air conditioner on a higher temperature setting without affecting your comfort.

Cool weather/up position - (Reverse) Fan turns clockwise direction. An upward airflow moves warm air off the ceiling area as shown in illustration B. This allows you to set your heating unit on a lower setting without affecting your comfort.

NOTE: Turn off and wait for fan to stop before changing the setting of the forward/reverse slide switch.

### Maintenance

- Because of the fan's natural movement, some connections may become loose. Check the support connections, brackets, and blade attachments twice a year. Make sure they are secure.
- Clean your fan periodically to help maintain its new appearance over the years. Do not use water when cleaning. This could damage the motor, or the wood, or possibly cause electrical shock.
- Use only a soft brush or lint-free cloth to avoid scratching the finish. The plating is sealed with a lacquer coating to minimize discoloration or tarnishing.
- There is no need to oil your fan. The motor has permanently lubricated bearings.
