

## Installation Guide for White Round Tube Climbing Frame Trellis

### *Package Contents*

- White round main tube
- Green horizontal crossbars
- A pair of labor protection gloves

### *Preparation*

- Choose a well-lit area where plants can receive ample sunlight.
- Prepare the soil by loosening it to a depth of 12–15 inches, removing any debris or stones.

### *Assembly Instructions*

#### 1. **Safety Precautions:**

- Wear the labor protection gloves provided to avoid any scrapes or cuts during installation.

#### 2. **Crossbar Attachment:**

- Identify the pre-drilled holes on the white round tube.
- Slide each green crossbar into the corresponding holes on the tube, starting from the bottom and working up to the top, ensuring they are secure and level.

### *Installation Steps*

#### 1. **Positioning the Trellis:**

- Stand the white round tube upright where you wish to install the trellis.
- For harder soil, you might need to use a hammer to gently tap the tube into place without bending it.

## 2. **Training Plants on the Trellis:**

- Once the white round tube is in place, you can start training your climbing plants on the trellis. Guide the vines through the crossbars to encourage vertical growth and help the plants establish themselves on the structure. This approach provides the necessary support for the plants as they grow.
