

trafficMASTER™

For use under:

- Laminate Flooring
- Rigid PVC Core Planks (5mm or thicker)
- Floating Engineered Wood
- WPC Wood Plastic Composite (5mm or thicker)

WHY IS TRAFFICMASTER FIBER UNDERLAYMENT THE BEST?

For use over wood and concrete subfloors

Excellent Sound Control

Reduces unwanted noise from traveling to other rooms

Superior Moisture Protection

Vapor barrier provides superior moisture protection over other foam underlays

Best Support for Your Floors!

Will not crush or compress like other foam underlays. Helps support the click and lock mechanism.

RECYCLED

Made from all natural recycled materials, not from petroleum based materials

IIC: 71
Delta Δ IIC 25
STC: 66

trafficMASTER™

For use under:

- Laminate Flooring
- Rigid PVC Core Planks (5mm or thicker)
- Floating Engineered Wood
- WPC Wood Plastic Composite (5mm or thicker)

For use over wood and concrete subfloors

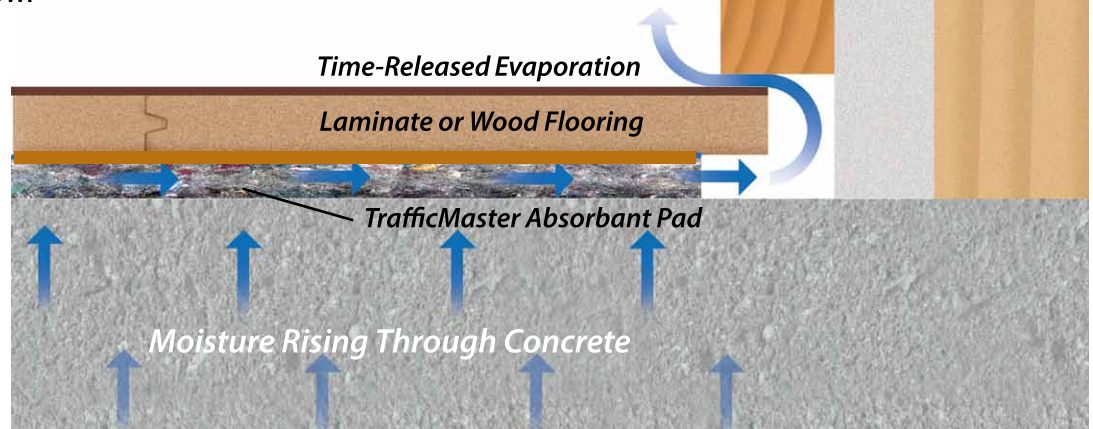

MOISTURE PROTECTION:

- Water vapor is present in concrete
- If vapors are blocked or trapped, vapors become harmful water.
- Concrete needs to breathe, never allow vapors to become bulk moisture
- The attached vapor barrier protects the overlying flooring from harmful moisture.
- Fibers are treated with a safe anti-microbial to inhibit mold and mildew.

TrafficMaster doesn't just trap moisture, allows concrete to breathe

Base Trim/Wall Board/Stud

PROTECTION FROM LEAKS:

Spills, leaky plumbing, faulty icemakers can cause floor damage. TrafficMaster's fibers can absorb up to 5 times it's own weight, drawing harmful moisture in while protecting the overlying floor.
