

FAQ

***The Turbine Boss™* needs no batteries or electricity. That's hard to believe. How does it work?**

Consider the outdoor dial thermometer. On a hot day the dial is pointing near 90° and on a cold day the dial is pointing near 30°. What makes the dial move?

It has a thermostatic controller that expands on hot days and contracts on cold days. Thus, the dial is moved by temperature. And like the dial thermometer, ***The Turbine Boss™*** gives you many, many years of trouble-free service.
