HOW TO LOAD A SUREBONDER STAPLE GUN

STEP #1
Determine length of staples to be used for your project.

A. The staple should sit flush with your fastened material and sink 3/16" into base material.

Fastened Material

Base Material

B. If staple doesn't sit flush then the staple is too long, try a shorter leg length.

NOTE: Leg length should be 2½ times longer than the thickness of the material being stapled to.

STEP #2
Squeeze the track release and pull out the track.

Pull out

STEP #3
Load a staple strip into the empty chamber with the points facing up.

DO NOT LOAD STAPLES ON TRACK

STEP #4
Push the track release closed and now you're ready to start your project.

NOTE: If the staples are loaded incorrectly the track will not close.

Push track in until it clicks shut
