

(WITH INTEGRATED RECIRCULATION PUMP)

## ■ CIRC-LOGIC RECIRCULATION TECHNOLOGY

Rinnai Circ-Logic recirculation technology allows users to set recirculation patterns that coincide with their hot water usage patterns. Hot water is available when needed, without the expense of circulating it during times of inactivity. Two recirculation modes are available:

- **Dedicated Mode** - With a dedicated return line, the integrated pump recirculates water from the tankless water heater through the return line and back to the heater.
- **Crossover Mode** - In applications where a dedicated return line is not available or is difficult to install, Circ-Logic technology allows for the simple installation of a **Thermal Bypass Valve** (included with purchase) at the fixture farthest away from the water heater.

## Smart-Circ™ Intelligent Recirculation™

- Intelligent Recirculation “learns” users’ hot water patterns to schedule recirculation.

## ■ EASE OF INSTALLATION AND SERVICEABILITY

- Compact Design to Save Space
- Wi-Fi Technology for Remote Monitoring and Management
- Simple Gas Conversion

- Manual schedule selection is available with Accessory controllers (MC-195T or control•r™ Wi-Fi module)

**Internal Multi-Speed DC Pump**

Integrated pump allows for recirculation through a dedicated return line or crossover with thermal bypass valve.

**Maximum Recirculation Pipe Lengths**

- 400 equivalent feet for 3/4 in. pipe diameter
  - 100 equivalent feet for 1/2 in. pipe diameter
- Take equivalent elbow lengths into consideration when calculating pipe length.*
