

Fix it with FLEX-Drain® Professional Grade Drainage Solutions.

Above ground or below – DIY or PRO – FLEX-Drain® helps you get the job done – faster and easier, with professional grade durability and more versatility than traditional corrugated pipe. Flexible and expandable, FLEX-Drain® easily bends around any obstacle, holds its shape during installation and with a simple snap, its integrated soil-tight fittings lock securely and stay connected during backfilling. Taping joints is unnecessary.

- F

Solid FLEX-Drain® – Available in 8, 12 and 25-foot lengths, this solid pipe is great for applications that involve diverting water from one point to another (away from downspouts, for instance). Water can't seep out until it reaches the end of the pipe.
- G

Perforated FLEX-Drain® – Available in 8, 12 and 25-foot lengths, this pipe has spaced slits, so water drains in stages. Ideal for ground water drainage like French drains or dispersing water from flower beds. To avoid clogging the slits, use this pipe where surrounding soil is coarse and debris is minimal.
- H

Perforated FLEX-Drain® with Sock – Available in 25-foot lengths only, this pipe also has spaced slits, covered by a removable polyester sock. It's also perfect for applications such as French drains or dispersing water from flower beds, but works even better in locations where surrounding soil or sand is fine and requires filtration or where debris is considerable.

More than just pipe, FLEX-Drain® is a complete drainage solution system that's widely compatible with virtually all traditional 3" and 4" corrugated pipe and 4" PVC. Technologically superior, it's made with no-break copolymers and exceeds all applicable ASTM crush standards.

- A

Fittings:

Flexible Downspout Adaptor – Available in sizes 2"x 3" and 3"x 4", this adaptor fits all 3" and 4" corrugated pipe and 4" PVC. Its flexibility allows an easier connection and more versatility than rigid adaptors.
- B

Universal Pipe Connector – Features an inner dimension that connects to 3" pipe and an outer dimension that connects to 4" pipe. The most economical solution for connecting FLEX-Drain®, 3" and 4" corrugated pipe and 4" PVC.
- C

FLEX-Drain® Coupler – Female coupler for joining 2 cut pieces of FLEX-Drain® together. Also used to adapt FLEX-Drain® to some wyes and tees to improve the fit and function of the overall system. Or, simply use our Flexible T / Y™ Combo, mentioned below.
- D

Flexible Elbow/Connector™ – Expands up to 21" to connect 3" and 4" corrugated pipe and 4" PVC. It creates any angle or turn, expands to reach pipes that have been cut short and is an excellent repair piece for damaged sections of pipe.
- E

Flexible T/Y™ – Eliminates the need for rigid wyes and tees, because it flexes to become either. Works with 3" and 4" corrugated pipe and 4" PVC. Flexes and bends to fit most any angle.

MADE IN THE USA 

Draw your FLEX-Drain® solution on the graph paper below.

- Conectores:**

 - A Adaptador flexible para bajante pluvial** – Este adaptador, disponible en tamaños de 5,1 cm x 7,6 cm (2" x 3") y de 7,6 cm x 10,2 cm (3" x 4"), se adapta a todas las tuberías corrugadas de 7,6 cm (3") y de 10,2 cm (4") y de PVC de 10,2 cm (4"). Su flexibilidad permite una conexión más sencilla y mayor versatilidad que los adaptadores rígidos.
 - B Conector para tubería universal** – Cuenta con un tamaño interior que se conecta a tuberías de 7,6 cm (3") y un tamaño exterior que se conecta a tuberías de 10,2 cm (4"). La solución más económica para conectar FLEX-Drain[®], tuberías corrugadas de 7,6 cm (3") y de 10,2 cm (4") y PVC de 10,2 cm (4").
 - C Acoplador FLEX-Drain[®]** – Acoplador hembra para unir dos piezas cortadas de FLEX-Drain[®]. También se usa para adaptar el FLEX-Drain[®] a algunos conectores en Y y en T para mejorar el ajuste y el funcionamiento del todo el sistema. O use únicamente nuestra combinación de unión en T e Y flexible[™] que se menciona a continuación.
 - D Conector flexible Elbow/Connector[™]** – Se expande hasta 53,3 cm (21") para conectar tuberías corrugadas de 7,6 cm (3") y de 10,2 cm (4") y PVC de 10,2 cm (4"). Crea cualquier ángulo o giro, se expande para alcanzar tuberías demasiado cortas y constituye una excelente pieza de repuesto para secciones dañadas de tuberías.
 - E Unión en T e Y flexible[™]** – Elimina la necesidad de uniones en Y y en T rígidas, ya que se dobla para convertirse en cualquiera de ellas. Funciona con tuberías corrugadas de 7,6 cm (3") y de 10,2 cm (4") y PVC de 10,2 cm (4"). Se pliega y dobla para adaptarse a casi todos los ángulos.
