

Instructions / Assembly

Included Parts

Non-electric bidet attachment main unit, adjustable mounting brackets, bolts, wingnuts, T-adapter, rubber washers, flexible water line, installation manual.

Step-by-Step Assembly

1. Turn off the toilet's water supply valve and flush to empty the tank.
2. Remove the original toilet seat by unscrewing the mounting bolts from the underside.
3. Install the adjustable mounting brackets onto the bidet attachment, then align them with the toilet's bolt holes. Secure with bolts and wingnuts (tighten firmly, do not over-tighten).
4. Unscrew the existing water supply line from the bottom of the toilet tank. Attach the included T-adapter to the tank's fill valve (use a rubber washer for a leak-proof seal).
5. Reattach the original water line to one port of the T-adapter. Connect the bidet's flexible water line to the other port of the T-adapter (ensure the washer is properly seated).
6. Turn the water supply valve back on and check all connections for leaks. Tighten any loose fittings if needed.
7. Test the bidet: Twist the knob to adjust water pressure and switch between rear/feminine wash modes. Confirm the nozzles retract behind the guard gate after use.
