Your air compressor has been engineered and manufactured to our high standard for dependability, ease of operation, and operator safety. When properly cared for, it will give you years of rugged, trouble-free performance.

**WARNING:**
To reduce the risk of injury, the user must read and understand the operator’s manual before using this product.

Thank you for buying a RIDGID® product.

INTRODUCTION

This product has many features for making its use more pleasant and enjoyable. Safety, performance, and dependability have been given top priority in the design of this product making it easy to maintain and operate.

DANGER:

This compressor/pump is not equipped and should not be used to supply breathing quality air. Additional equipment would be necessary to properly filter and purify the air to meet minimal specifications for Grade D breathing as described in Compressed Gas Association Commodity Specification G 7.1 - 1966, OSHA 29 CFR 1910.134. Compressed Gas Association, 4221 Walney Road, Fifth Floor, Chantilly, VA 20151-2923, (703) 788-2700, www.cganet.com. Any such additional equipment has not been examined and no implication of proper use for breathing air is intended or implied.

If this compressor is altered in any way, existing warranties shall be voided. RIDGID® and One World Technologies, Inc. disclaim any liabilities whatsoever for any loss, personal injury, or damage.

DISCLAIMER OF WARRANTIES

In the event the compressor is used for the purpose of breathing air application and proper in-line safety and alarm equipment is not simultaneously used, existing warranties shall be voided, and RIDGID® disclaims any liabilities whatsoever for any loss, personal injury, or damage.
GENERAL SAFETY RULES

**WARNING:**

Read and understand all instructions. Failure to follow all instructions listed below may result in electric shock, fire, and/or serious personal injury.

SAVE THESE INSTRUCTIONS

**WORK AREA**

- Keep your work area clean and well lit. Cluttered benches and dark areas invite accidents. Floor must not be slippery from wax or dust.
- Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases, or dust. Power tools create sparks which may ignite the dust or fumes.
- Keep bystanders, children, and visitors away while operating tools. Distractions can cause you to lose control.
- Operate air compressor in an open area at least 18 in. away from any wall or object that could restrict the flow of fresh air to ventilation openings.

**ELECTRICAL SAFETY**

- Avoid body contact with grounded surfaces such as pipes, radiators, ranges, and refrigerators. There is an increased risk of electric shock if your body is grounded.
- Don’t expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- Do not abuse the cord. Never use the cord to carry the tool or pull the plug from an outlet. Keep cord away from heat, oil, sharp edges, or moving parts. Replace damaged cords immediately. Damaged cords increase the risk of electric shock.
- When operating a power tool outside, use an outdoor extension cord marked “W-A” or “W”. These cords are rated for outdoor use and reduce the risk of electric shock.

**PERSONAL SAFETY**

- Eye protection which conforms to ANSI specifications and provides protection against flying particles both from the FRONT and SIDE should ALWAYS be worn by the operator and others in the work area when loading, operating, or servicing this tool. Eye protection is required to guard against flying fasteners and debris, which could cause severe eye injury.
- The employer and/or user must ensure that proper eye protection is worn. We recommend a Wide Vision Safety Mask for use over eyeglasses or standard safety glasses that provide protection against flying particles both from the front and side. Always use eye protection which is marked to comply with ANSI Z87.1.
- Additional safety protection will be required in some environments. For example, the working area may include exposure to a noise level which can lead to hearing damage. The employer and user must ensure that any necessary hearing protection is provided and used by the operator and others in the work area. Some environments will require the use of head protection equipment. When required, the employer and user must ensure that head protection marked to comply with ANSI Z89.1 is used.
- Stay alert, watch what you are doing, and use common sense when operating a power tool. Do not use tool while tired or under the influence of drugs, alcohol, or medication. A moment of inattention while operating power tools may result in serious personal injury.
- Dress properly. Do not wear loose clothing or jewelry. Contain long hair. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewelry, or long hair can be caught in moving parts.
- Do not overreach. Keep proper footing and balance at all times. Proper footing and balance enables better control of the tool in unexpected situations.
- Use safety equipment. Always wear eye protection. Dust mask, nonskid safety shoes, hard hat, or hearing protection must be used for appropriate conditions.
- Do not use on a ladder or unstable support. Stable footing on a solid surface enables better control of the tool in unexpected situations.

**TOOL USE AND CARE**

- Do not exceed the pressure rating of any component in the system.
- Protect material lines and air lines from damage or puncture. Keep hose and power cord away from sharp objects, chemical spills, oil, solvents, and wet floors.
- Check hoses for weak or worn condition before each use, making certain all connections are secure. Do not use if defect is found. Purchase a new hose or notify an authorized service center for examination or repair.
- Release all pressures within the system slowly. Dust and debris may be harmful.
- Store idle tools out of the reach of children and other untrained persons. Tools are dangerous in the hands of untrained users.
- Maintain tools with care. Follow maintenance instructions. Properly maintained tools are easier to control.
- Check for misalignment or binding of moving parts, breakage of parts, and any other condition that may affect the tool's operation. If damaged, have the tool serviced before using. Many accidents are caused by poorly maintained tools.
- Never point any tool toward yourself or others.
- Keep the exterior of the air compressor dry, clean, and free from oil and grease. Always use a clean cloth when cleaning. Never use brake fluids, gasoline, petroleum-based products, or any strong solvents to clean the unit. Following this rule will reduce the risk of deterioration of the enclosure plastic.

**SERVICE**

- Tool service must be performed only by qualified repair personnel. Service or maintenance performed by unqualified personnel may result in a risk of injury.
- Disconnect power supply, open drain valve to decompress tanks and allow water to drain, and allow air compressor to become cool to the touch before servicing. Turn pressure regulator knob fully clockwise after shutting off compressor.
GENERAL SAFETY RULES

- When servicing a tool, use only identical replacement parts. Follow instructions in the Maintenance section of this manual. Use of unauthorized parts or failure to follow Maintenance instructions may create a risk of injury.

SPECIFIC SAFETY RULES

- Know your power tool. Read operator's manual carefully. Learn its applications and limitations, as well as the specific potential hazards related to this tool. Following this rule will reduce the risk of electric shock, fire, or serious injury.
- Drain tanks of moisture after each day's use. If unit will not be used for a while, it is best to leave drain valve open until such time as it is to be used. This will allow moisture to completely drain out and help prevent corrosion on the inside of tanks.
- Risk of Bursting. Do not adjust regulator to result in output pressure greater than marked maximum pressure of attachment. Do not use at pressure greater than 145 psi.
- Never direct a jet of compressed air toward people or animals. Take care not to blow dust and dirt towards yourself or others. Following this rule will reduce the risk of serious injury.
- Do not use this air compressor to spray chemicals. Your lungs can be damaged by inhaling toxic fumes. A respirator may be necessary in dusty environments or when spraying paint. Do not carry while painting.
- Inspect tool cords and hoses periodically and, if damaged, have repaired at your nearest Authorized Service Center. Constantly stay aware of cord location. Following this rule will reduce the risk of electric shock or fire.
- Never use an electrical adaptor with this grounded plug.
- Check damaged parts. Before further use of the air compressor or air tool, a guard or other part that is damaged should be carefully checked to determine that it will operate properly and perform its intended function. Check for alignment of moving parts, binding of moving parts, breakage of parts, mounting, and any other conditions that may affect its operation. A guard or other part that is damaged should be properly repaired or replaced by an authorized service center. Following this rule will reduce the risk of shock, fire, or serious injury.
- Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. A wire gauge size (A.W.G.) of at least 14 is recommended for an extension cord 25 feet or less in length. A cord exceeding 50 feet is not recommended. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating.
- This equipment incorporates parts, such as snap switches, receptacles, and the like that tend to produce arcs or sparks and, therefore, when located in a garage, it should be in a room or enclosure provided for the purpose, or should be 18 in. (457 mm) or more above the floor.
- Never store tool with air connected. Storing the tool with air connected can result in unexpected firing and possible serious personal injury.
- Protect your lungs. Wear a face or dust mask if the operation is dusty. Following this rule will reduce the risk of serious personal injury.
- If the power supply cord is damaged, it must be replaced only by the manufacturer or by an authorized service center to avoid risk.
- Save these instructions. Refer to them frequently and use them to instruct others who may use this tool. If you loan someone this tool, loan them these instructions also.
Some of the following symbols may be used on this product. Please study them and learn their meaning. Proper interpretation of these symbols will allow you to operate the product better and safer.

SERVICE
Servicing requires extreme care and knowledge and should be performed only by a qualified service technician. For service we suggest you return the product to your nearest AUTHORIZED SERVICE CENTER for repair. When servicing, use only identical replacement parts.

⚠️ WARNING:
To avoid serious personal injury, do not attempt to use this product until you read thoroughly and understand completely the operator's manual. If you do not understand the warnings and instructions in the operator's manual, do not use this product. Call RIDGID® customer service for assistance.

⚠️ WARNING:
The operation of any power tool can result in foreign objects being thrown into your eyes, which can result in severe eye damage. Before beginning power tool operation, always wear safety goggles or safety glasses with side shields and, when needed, a full face shield. We recommend Wide Vision Safety Mask for use over eyeglasses or standard safety glasses with side shields. Always use eye protection which is marked to comply with ANSI Z87.1.

SAVE THESE INSTRUCTIONS
EXTENSION CORDS
Use only 3-wire extension cords that have 3-prong grounding plugs and 3-pole receptacles that accept the product’s plug. When using a power tool at a considerable distance from the power source, use an extension cord heavy enough to carry the current that the tool will draw. An undersized extension cord will cause a drop in line voltage, resulting in a loss of power and causing the motor to overheat. Use the chart provided below to determine the minimum wire size required in an extension cord. Only round jacketed cords listed by Underwriter’s Laboratories (UL) should be used.

- **Ampere rating (on product data plate)**
  - 0-2.0  2.1-3.4  3.5-5.0  5.1-7.0  7.1-12.0  12.1-16.0

**Used on 12 gauge - 20 amp circuit.**

**NOTE:** AWG = American Wire Gauge

When working with the product outdoors, use an extension cord that is designed for outside use. This is indicated by the letters “W-A” or “W” on the cord’s jacket.

Before using an extension cord, inspect it for loose or exposed wires and cut or worn insulation.

**WARNING:**
Keep the extension cord clear of the working area. Position the cord so that it will not get caught on lumber, tools, or other obstructions while you are working with a power tool. Failure to do so can result in serious personal injury.

**WARNING:**
Check extension cords before each use. If damaged replace immediately. Never use the product with a damaged cord since touching the damaged area could cause electrical shock resulting in serious injury.

ELECTRICAL CONNECTION
This product is powered by a precision-built electric motor. It should be connected to a power supply that is 120 V, AC only, (normal household current) 60 Hz. Do not operate this product on direct current (DC). A substantial voltage drop will cause a loss of power and the motor will overheat. If the product does not operate when plugged into an outlet, double check the power supply.

SPEED AND WIRING
The no-load speed of this product is approximately 3,450 rpm. This speed is not constant and decreases under a load or with lower voltage. For voltage, the wiring in a shop is as important as the motor’s horsepower rating. A line intended only for lights cannot properly carry a power tool motor. Wire that is heavy enough for a short distance will be too light for a greater distance. A line that can support one power tool may not be able to support two or three tools.

GROUNDING INSTRUCTIONS
This product must be grounded. In the event of a malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This product is equipped with an electric cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into a matching outlet that is properly installed and grounded in accordance with all local codes and ordinances.

Do not modify the plug provided. If it will not fit the outlet, have the proper outlet installed by a qualified electrician.

**WARNING:**
Improper installation of the grounding plug is liable to result in a risk of electric shock. When repair or replacement of the cord is required, do not connect the grounding wire to either flat blade terminal. The wire with insulation having an outer surface that is green with or without yellow stripes is the grounding wire.

Check with a qualified electrician or service personnel if the grounding instructions are not completely understood, or if in doubt as to whether the product is properly grounded.

Repair or replace a damaged or worn cord immediately.

This product is for use on a nominal 120 V circuit and has a grounding plug similar to the plug illustrated in figure 1. Only connect the product to an outlet having the same configuration as the plug. Do not use an adapter with this product.

GROUNDING PIN  120 V GROUNDED OUTLET

---

**Fig. 1**
GLOSSARY OF TERMS

Air Filter
Porous element contained within a metal or plastic housing attached to the compressor cylinder head which removes impurities from the intake air of the compressor.

Air Tank
Cylindrical component which contains the compressed air.

Amperage Overload Switch (Manual)
Automatically shuts off the compressor if the temperature of the electric motor exceeds a predetermined limit.

Check Valve
Device that prevents compressed air from flowing back from the air tank to the compressor pump.

Cut-In Pressure
The low pressure at which the motor will automatically restart.

Cut-Off Pressure
The high pressure at which the motor will automatically shut off.

Electric Motor
Device which provides the rotational force necessary to operate the compressor pump.

On/Off Switch
Control which turns the air compressor on or off. The pressure switch will not automatically start and control the compressor unless the manual On/Off Switch is in the **ON** position.

NPT (National Pipe Thread)
A seal thread tape must be used to provide a leak-free seal on pipe threaded connections.

Pressure Regulator Knob
Regulates the outgoing pressure from the air outlet to the tool. It is possible to increase or decrease the pressure at the outlet by adjusting this control knob.

Pressure Switch
Automatically controls the on/off cycling of the compressor. It stops the compressor when the cut-off pressure in the tank is reached and starts the compressor when the air pressure drops below the cut-in pressure.

PSI (Pounds Per Square Inch)
Measurement of the pressure exerted by the force of the air. The actual psi is measured by a pressure gauge on the compressor.

Pump
Produces the compressed air with a reciprocating piston contained within the cylinder.

Regulator Pressure Gauge
Displays the current line pressure. Line pressure is adjusted by rotating the pressure regulator knob.

Safety valve
Prevents air pressure in the air tank from rising over a predetermined limit.

SCFM (Standard Cubic Feet Per Minute) or CFM (Cubic Feet Per Minute)
A unit of measure of air delivery.

Tank Pressure Gauge
Indicates the pressure in the air tank.

NPT (National Pipe Thread)
A seal thread tape must be used to provide a leak-free seal on pipe threaded connections.
**KNOW YOUR AIR COMPRESSOR**

*See Figure 2.*
The safe use of this product requires an understanding of the information on the product and in this operator’s manual as well as a knowledge of the project you are attempting. Before use of this product, familiarize yourself with all operating features and safety rules.

**DRAIN VALVE**
Drain valves are located on both tanks for draining condensation to help prevent tank corrosion.

**HANDLES**
The air compressor is equipped with retractable handles for ease of use while transporting and while in use.

**PRESSURE REGULATOR KNOB**
Use the pressure regulator knob to adjust the amount of air being delivered through the hose. Pressing down on the knob will lock it into place. This prevents movement of the knob caused by vibration during use.

**REGULATOR PRESSURE GAUGE**
The current line pressure is displayed on the regulator pressure gauge. This pressure can be adjusted by rotating the pressure regulator knob.

**SAFETY VALVE**
The safety valve is designed to automatically release air if the air tank pressure exceeds the preset maximum.

**TANK PRESSURE GAUGE**
The tank pressure gauge indicates the pressure of the air in the tank.

ASSEMBLY

UNPACKING
This product requires assembly.

- Carefully remove the product and any accessories from the box. Make sure that all items listed in the packing list are included.
- Inspect the product carefully to make sure no breakage or damage occurred during shipping.
- Do not discard the packing material until you have carefully inspected and satisfactorily operated the product.
- If any parts are damaged or missing, please call 1-800-4-RIDGID for assistance.

PACKING LIST
Air Compressor
Handles (2)
Phillips Head Screw (4)
Wheel
Axle Rod
Hitch Pins (2)
Washers (2)
Oil Dipstick
Lubricant
Operator’s Manual

⚠️ WARNING:
If any parts are damaged or missing do not operate this product until the parts are replaced. Failure to heed this warning could result in serious personal injury.

⚠️ WARNING:
Do not attempt to modify this product or create accessories not recommended for use with this product. Any such alteration or modification is misuse and could result in a hazardous condition leading to possible serious personal injury.

INSTALLING THE HANDLES
See Figure 3.
- Insert supplied handle through handle slot by lifting up on handle release knob and sliding handle through slot.
- Push handle all the way up to the bent portion of the handle and release handle release knob.
- Install supplied Phillips head screw into slot in handle.
- Repeat handle installation on the opposite side.
INSTALLING THE DIPSTICK
See Figure 4.
The air compressor has a label installed between the oil fill hole and a travel cap. Before using the unit the first time, remove travel cap and label and insert supplied dipstick. Make sure to add oil before first use. See Checking the Oil before first time operation.

CHECKING THE OIL
See Figures 4 - 5.
Always check the oil when the unit is sitting on a level surface and before first use.
- Insert the dipstick into the oil fill hole completely. Remove the dipstick and check the oil level.
- Make sure the reading is between the MIN and MAX reference levels on the dipstick.
  NOTE: Never let the oil drop to a level lower than MIN. Maximum level is reached when the oil reaches the MAX level reference on the dipstick.
- Reinsert the dipstick securely into the oil fill hole.

To add oil:
- Remove the dipstick.
- Using a funnel, carefully pour oil into the oil fill hole. Refill only with synthetic oil SAE 5W50.
  NOTE: Avoid using too much oil. Ensure that the level of the oil does not exceed the maximum reference level on the dipstick.
- Reinsert the dipstick securely into the oil fill hole.

INSTALLING THE SEMI-PNEUMATIC TIRE
See Figure 6.
- Insert supplied axle rod through hole in semi-pneumatic tire hub, centering the tire between the two center holes in the axle rod.
- Insert washers onto axle rod on either side and slide hitch pins through both holes on either side of semi-pneumatic tire to secure semi-pneumatic tire to the center of the axle rod.
- Insert tire rod (with semi-pneumatic tire installed) end through metal bracket on the front of the air tank.
- Insert the other axle rod end through metal bracket on the opposite side.
- Align the holes on the axle rod end with the slots in the metal brackets and install supplied screws through the lined up holes.
OPERATION

⚠️ DANGER:
Do not disassemble check valve, tank drain valves or safety relief valve with air in tank — bleed tanks.

⚠️ WARNING:
Do not allow familiarity with products to make you careless. Remember that a careless fraction of a second is sufficient to inflict severe injury.

⚠️ WARNING:
Always wear safety goggles or safety glasses with side shields when operating products. Failure to do so could result in objects being thrown into your eyes resulting in possible serious injury.

⚠️ WARNING:
Do not use any attachments or accessories not recommended by the manufacturer of this product. The use of attachments or accessories not recommended can result in serious personal injury.

⚠️ WARNING:
Do not attach any tools to the open end of the hose until start-up has been completed.

⚠️ CAUTION:
Do not use in an environment that is dusty or otherwise contaminated. Using the air compressor in this type of environment may cause damage to the unit.

APPLICATIONS
Air compressors are utilized in a variety of air system applications. Match hoses, connectors, air tools, and accessories to the capabilities of the air compressor.

You may use this product for the purposes listed below:
- Operating some air-powered tools
- Operating air accessories such as air nozzles and inflators

ATTACHING A HOSE
See Figure 7.
- Make sure the air compressor is off and unplugged.
- Rotate pressure regulator knob fully counterclockwise.
- Attach hose with male connector to quick connect universal fitting on air compressor. Make sure to push the hose adapter end fully into the coupler until the sleeve springs forward to lock it in place.

TURNING THE AIR COMPRESSOR ON/OFF
See Figure 8.
- With the air compressor plugged in, pull the power switch to the ON position to power the compressor on.
- To turn the air compressor off, push the power switch to the OFF position.

NOTE: When the compressor is in the ON position, the air compressor will automatically turn back on when the designated tank air pressure drops below the preset pressure limit. It will also shut off again when the desired pressure is reached.

USING THE AIR COMPRESSOR
See Figures 9 - 10.
- Ensure power switch is in the OFF (O) position and air compressor is unplugged.
- If not already installed, attach hose to compressor as previously instructed.
OPERATION

- Attach 1/4 in. NPT male connector fitting to accessory or tool you intend to use.
- Insert the other end of the male connector to the quick coupler on the open end of hose.

⚠️ WARNING:
Always ensure the switch is in the OFF (O) position and the regulator pressure gauge reads zero before changing air tools or disconnecting the hose from the air outlet. Failure to do so could result in possible serious personal injury.

- Connect the power cord to the power supply.
- Turn the switch ON (I).
- Pull out and rotate pressure regulator knob to desired line pressure. Turning the knob clockwise increases air pressure at the outlet; turning counterclockwise reduces air pressure at the outlet.
- Following all safety precautions in this manual and the manufacturer’s instructions in the air tool manual, you may now proceed to use your air-powered tool.

⚠️ WARNING:
Air powered tools may require more air consumption than this air compressor is capable of providing. Check the tool manual to avoid damage to the tool or risk of personal injury.

- Control the amount of air flow with the pressure regulator knob. Turning the knob fully counterclockwise will completely stop the flow of air.

**NOTE:** Always use the minimum amount of pressure necessary for your application. Using a higher pressure than needed will drain air from the tank more rapidly and cause the unit to cycle on more frequently.

- When finished, always drain the tank and unplug the unit. Never leave the unit plugged in and/or running unattended.

DRAINING THE TANKS

*See Figure 11.*

To help prevent tank corrosion and keep moisture out of the air used, the air tanks of the compressor should be drained daily.

**NOTE:** The air compressor has two separate tanks. Be sure to open drain valves for both and perform this operation for both tanks.

To drain:
- Turn the air compressor off.
- Pull the ring on the pressure relief valve to release until pressure gauge reads less than 20 psi.
- Release the ring.

- Rotate drain valves counterclockwise to open.
- Tilt tank to drain moisture from tank into a suitable container.

**NOTE:** Condensate is a polluting material and should be disposed of in compliance with local regulations.

- If drain valves are clogged, release all air pressure, remove and clean valves, then reinstall.

⚠️ WARNING:
Unplug the air compressor and release all air from the tanks before servicing. Failure to depressurize tanks before attempting to remove valve may cause serious personal injury.

- Rotate drain valves clockwise until tightly closed.
OPERATION

CHECKING THE SAFETY VALVE
See Figure 12.

⚠️ DANGER:
Do not attempt to tamper with the safety valve. Anything loosened from this device could fly up and hit you. Failure to heed this warning could result in death or serious personal injury.

The safety valve will automatically release air if the air tank pressure exceeds the preset maximum. The valve should be checked before each day of use by pulling the ring by hand.

- Turn the air compressor on and allow the tanks to fill. The compressor will shut off when the pressure reaches the preset maximum.
- Turn the air compressor off.
- Pull the ring on the safety valve to release air for three to five seconds.
- Release the ring. Air must immediately stop escaping when the ring is released. Any continued loss of air after releasing the safety valve ring indicates a problem with the safety valve. Discontinue use and seek service before continued use of the air compressor.

⚠️ WARNING:
If air leaks after the ring has been released, or if the valve is stuck and cannot be actuated by the ring. Do not use the air compressor until the safety valve has been replaced. Use of the air compressor in this condition could result in serious personal injury.

RESET BUTTON
See Figure 13.

When amperage into the air compressor exceeds the specified amperage, the air compressor will automatically shut off.

To reset the air compressor:
- Turn the air compressor off.
- Unplug the air compressor for 30 minutes.
  **NOTE:** If the overload protector is actuated, the motor must be allowed to cool down for 30 minutes before manual resetting.
- Press the reset button.
- Plug the air compressor into an approved outlet.
- Turn the air compressor on.
MAINTENANCE

⚠️ WARNING:
When servicing use only identical RIDGID® replacement parts. Use of any other parts may create a hazard or cause product damage.

⚠️ WARNING:
Always wear safety goggles or safety glasses with side shields during power tool operation or when blowing dust. If operation is dusty, also wear a dust mask.

⚠️ WARNING:
Always release all pressure, disconnect from power supply, and allow unit to cool to the touch before cleaning or making repairs on the air compressor.

GENERAL MAINTENANCE
Avoid using solvents when cleaning plastic parts. Most plastics are susceptible to damage from various types of commercial solvents and may be damaged by their use. Use clean cloths to remove dirt, dust, oil, grease, etc.
As a routine part of air compressor maintenance, it is also advised that the oil is routinely checked for proper levels.

⚠️ WARNING:
Do not at any time let brake fluids, gasoline, petroleum-based products, penetrating oils, etc., come in contact with plastic parts. Chemicals can damage, weaken or destroy plastic which may result in serious personal injury. Electric tools used on fiberglass material, wallboard, spackling compounds, or plaster are subject to accelerated wear and possible premature failure because the fiberglass chips and grindings are highly abrasive to bearings, brushes, commutators, etc. Consequently, we do not recommend using this product for extended work on these types of materials. However, if you do work with any of these materials, it is extremely important to clean the product using compressed air.

LUBRICATION
All of the bearings in this product are lubricated with a sufficient amount of high grade lubricant for the life of the unit under normal operating conditions. Therefore, no further lubrication is required.

REPLACING THE AIR FILTER
See Figure 14.
- Remove the air filter screw.
- Remove the air filter cover.
- Remove the air filter.
- Install new air filter.
- Install the air filter cover.
- Install the air filter screw.

REPLACING THE SEMI-PNEUMATIC TIRE
- Remove the screws installed through the holes and metal brackets in the tire rod.
- Remove the tire rod and pneumatic tire assembly.
- Remove hitch pins and washers on either side of semi-pneumatic tire.
- Remove semi-pneumatic tire.
To install new semi-pneumatic tire, see Installing the Semi-Pneumatic Tire in Assembly.
MAINTENANCE

CHANGING THE OIL
See Figure 15.

Replace the oil after the first 100 hours of operation and every 100 hours following the first oil change.

- Place a suitable container underneath the drain to collect used oil.
- Remove the drain plug with a 8 mm socket or wrench.
- When the used oil has drained, reinstall the drain plug and tighten with the wrench.
- Remove the dipstick.
- To refill, use a funnel to pour oil into the fill hole. Refill only with synthetic oil SAE 5W50.

**NOTE:** Avoid refilling with too much oil. Ensure that the level of the oil does not exceed the maximum reference level on the dipstick. The recommended amount of oil for refilling is 7.2 oz. (204 g).

- Reinsert the dipstick securely into the oil fill hole.

**DANGER:**
Do not disassemble check valve, tank drain valves or safety relief valve with air in tank — bleed tanks.
WARRANTY

RIDGID® AIR COMPRESSOR
3 YEAR LIMITED SERVICE WARRANTY

Proof of purchase must be presented when requesting warranty service.

This product is manufactured by One World Technologies, Inc. The trademark is licensed from RIDGID, Inc. All warranty communications should be directed to One World Technologies, Inc., attn: RIDGID Hand Held and Stationary Power Tool Technical Service at (toll free) 1-800-4-RIDGID.

90-DAY SATISFACTION GUARANTEE POLICY
During the first 90 days after the date of purchase, if you are dissatisfied with the performance of this RIDGID® Air Compressor for any reason you may return the tool to the dealer from which it was purchased for a full refund or exchange. To receive a replacement tool you must present proof of purchase and return all original equipment packaged with the original product. The replacement tool will be covered by the limited warranty for the balance of the 3 YEAR service warranty period.

WHAT IS COVERED UNDER THE 3 YEAR LIMITED SERVICE WARRANTY
This warranty covers all defects in workmanship or materials in this RIDGID® air compressor for the three-year period from the date of purchase. This warranty is specific to this air compressor. Warranties for other RIDGID® products may vary.

HOW TO OBTAIN SERVICE
To obtain service for this RIDGID® Air Compressor, you must return it; freight prepaid, or take it in to an authorized service center for RIDGID® branded Air Compressors. You may obtain the location of the authorized service center nearest you by calling (toll free) 1-800-4-RIDGID or by logging on to the RIDGID® website at www.ridgid.com. When requesting warranty service, you must present the original dated sales receipt. The authorized service center will repair any faulty workmanship, and either repair or replace any part covered under the warranty, at our option, at no charge to you.

WHAT IS NOT COVERED
This warranty applies only to the original purchaser at retail and may not be transferred. This warranty only covers defects arising under normal usage and does not cover any malfunction, failure or defect resulting from misuse, abuse, neglect, alteration, modification or repair by other than an authorized service center for RIDGID® branded Air Compressors. Consumable accessories provided with the tool such as, but not limited to, blades, bits and sand paper are not covered.

RIDGID, INC. AND ONE WORLD TECHNOLOGIES, INC. MAKE NO WARRANTIES, REPRESENTATIONS OR PROMISES AS TO THE QUALITY OR PERFORMANCE OF ITS POWER TOOLS OTHER THAN THOSE SPECIFICALLY STATED IN THIS WARRANTY.

ADDITIONAL LIMITATIONS
To the extent permitted by applicable law, all implied warranties, including warranties of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE, are disclaimed. Any implied warranties, including warranties of merchantability or fitness for a particular purpose, that cannot be disclaimed under state law are limited to three years from the date of purchase. One World Technologies, Inc. and RIDGID, Inc. are not responsible for direct, indirect, incidental or consequential damages. Some states do not allow limitations on how long an implied warranty lasts and/or do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
