

FM132 Instructions

WARNING

Install the push button control at least 10 ft. (3m) from the gate. **NEVER** install a push button where someone can reach through the gate to activate it or where a person can touch the gate or gate opener while activating the push button control.

Use GTO low voltage wire (RB509) to connect push button to control board. Detailed wiring instructions can be found in your gate opener instruction manual.

Mighty Mule Control Boards

Be sure wires are twisted and inserted into terminal connections with no loose strands touching other wires or terminal connections. Tighten set screws against exposed end of wires.
