

Put the Energy Efficient Home Improvement Credit to work for you. By adding insulation to a residence, not only will homeowners see improvements on their utility bills, but they can also receive a tax credit equal to 30% of the cost of insulation materials installed, up to \$1,200 each year. Plus, there is no lifetime dollar limit under the newly revised tax credit. Homeowners can make energy efficiency upgrades year after year and continue to collect the 30% tax credit.

The 25C Nonbusiness Energy Property residential tax credit (under the Inflation Reduction Act) was renamed the Energy Efficient Home Improvement Credit and revamped to provide more savings to homeowners.

Residents will see their savings from lower energy bills add up month after month, year after year. And by using 25C to claim tax credits of 30% of the cost of insulation materials, homeowners can save more money from the start.

The R-value of additional insulation required to meet the 25C credit requirements varies depending on the climate zone in which a home is located. Attics are the most common location to add insulation, along with garages, basements and crawlspaces.

No matter the insulation type or location, Johns Manville can help you. With a large selection of products that can be used for retrofitting a home, we've got the solution you need.

For more information on how to claim the tax credit, visit irs.gov for updates to Form 5695.

Sure, 25C tax credits benefit homeowners – but did you know they also have big benefits for you, *the contractor*?

Take the 25C Energy Efficient Home Improvement Credit: homeowners can get tax credits for adding insulation to improve their home's energy efficiency. But to do so, they're going to need a contractor to install the new insulation. Which is exactly how the tax credits benefit you too – more jobs!

To meet new energy codes, older homes need additional insulation. That so can be a win-win for the homeowner because they'll see reduced energy bills, while also being eligible for the tax credits.

Under 25C, homeowners get credits for up to 30% of the cost of insulation materials installed, for a max of \$1,200 each year. There's no lifetime dollar limit, meaning homeowners can continue to call you year after year to install more energy efficiency upgrades in different parts of their home.

The R-value of insulation required to meet the 25C credit requirements varies depending on the climate zone in which a home is located.

No matter the insulation type or location, Johns Manville can help you. With a large selection of products that can be used for retrofitting a home, we've got the solution you need.
