

Care and Maintenance

Rev-A-Shelf's organization products are designed and engineered to last a lifetime. We only use high quality materials for our polymer, wood, and metal organization products.

1. Wipe Down

Occasionally our products become dirty from everyday use in your kitchen, closet, utility room, laundry room or bathroom. To clean our products is usually as simple as wiping down with a damp cloth and wipe dry.

2. Adjust

Maintenance, if ever needed is usually only required for simply tightening a screw, bolt or adjusting a bracket that could have come loose over a period of time, from normal use.

3. Apply Grease

Our products are known to pivot, pull and slide and are usually mounted to a slide system that is coated with a multi-purpose grease. You should never have to apply more grease, but if you need to, you should always use a good quality multi-purpose grease. Never use any type of spray lubricant, as that will breakdown the grease over time.

Feel free to contact Rev-A-Shelf customer service if you have further questions.
