INSTRUCTION MANUAL

PART LIST

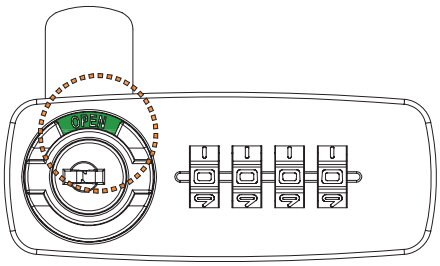

① Lock Indicator ②Key hole ③Knob ④Dial ⑤Alignment line

⑥ Find the combination code keys ⑦Reset button

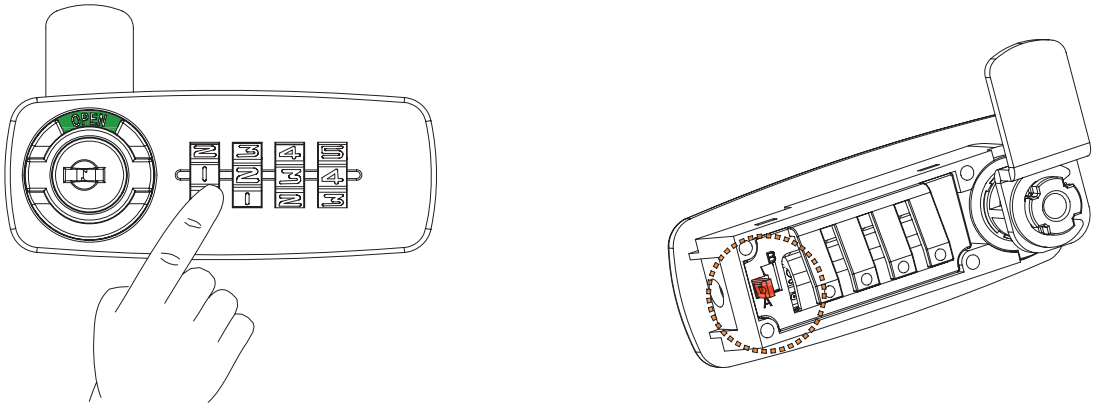

1. How to reset a new combination code

1) The factory original code is 0-0-0-0.

2) When you reset the combination code for the first time, dial the factory original code 0-0-0-0, then turn the knob to “Open” , the door will be open.

3) Push the Reset button from position A to position B, then dial a 4-code combination code you want (for example 1-2-3-4), after that push the Reset button from position B back to position A, then a new combination code is reset successfully.

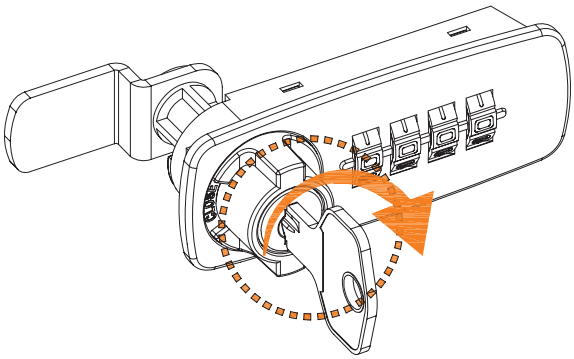

2. How to find the forgotten combination code

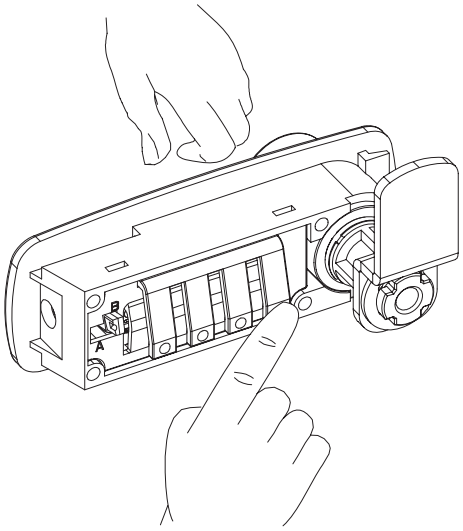

If you forgot your combination code, you can find it by the operation below:

1) Open the lock by override key, then take out the key.

2) You should do it with 2 hands. On hand press one of the “Find the combination code keys”, the other hand rotate the dial on the opposite position, until you can’t rotate the dial any more, the code on the alignment line is what you need.

3) Repeat above step 2) for the rest 3 Find the combination code keys, then you will find the 4-code combination code which you forgotten.

Important:

1) Every time you dial the combination code, make it on the alignment line. If the combination code is not on the alignment line, the combination code may can not open the lock.

2) Put the safe in safe place where you can find it easily when you need.
