

## **Care Instructions**

Well Woven rugs are made with top-quality materials and methods; however, rugs, like all home furnishings, require care and maintenance to keep them in great shape. The following tips will help you take care of your Well Woven rug and ensure it lasts for years to come:

- Vacuum regularly with non-beater bar vacuum.
- Spot clean as needed.
- For spills, remove excess and blot with a clean cloth dampened with lukewarm water. Repeat with a solution of water and detergent. Finish by Blotting with water and a clean white cloth.
- Use of a rug pad is recommended to reduce slipping and extend the life of your rug. The pad's can keep your rugs in place and prevent them from bunching and sliding while children or pets are playing or during normal daily use.
- Minimize wear due to traffic by rotating periodically. (3-6 months)

### **Unrolling/ uncurling the rug**

- Rug arrives factory rolled and may have creases from packaging and storage. Normally flattens within 5-7 days.
- You can also reduce or remove creasing by rolling the rug, pattern side, up and massaging the creases with your hands. This loosens the backing and helps ease it flat. You can also lay the rug out in a sunny room first; heat helps further loosen the backing.

### **Long Term Care**

- For long term soiling, or a particularly difficult stain, you may need to have your rug cleaned by a professional. Be sure to let them know what made the stain, as well as the construction and fiber content of your rug.
