

PARTS IDENTIFICATION

HOW TO USE YOUR HOT AIR POPPER

1. Remove the butter melter from the popper base.
2. Using the butter melter as your measuring cup, fill the butter melter with popcorn until it is level (1/4 cup). **DO NOT** pack popcorn into cup or overfill.
3. Pour popcorn into the popping chamber.
CAUTION: *Never fill the popping chamber with more than 1/4 cup of popcorn as this could result in overheating, smoking, scorched corn, and may cause the unit to shut off.*
4. Slide the container into the popper base.
5. Position the butter melter on the cover with the tab towards the right side of the popper. Never pop corn without the butter melter in position on the cover.
NOTE: *If you prefer buttered popcorn, put up to 3 tablespoons of SOFT butter or margarine in the butter melter. (Refrigerated butter will not melt during the short popping period.) Whether you melt butter or not, the butter melter must always be in position on the cover when popping corn.*
CAUTION: *DO NOT place salt, butter, margarine, shortening, or microwave popcorn into the popping chamber.*
6. Plug unit into a wall outlet and push the power switch to "I" to start popping.
7. Popping will be completed within 2 to 3 minutes.
NOTE: *Do not leave unit unattended while popping.*
8. Push the power switch to "O" and unplug the unit when popping is complete. Some popped corn may remain in the chamber after popping has stopped. To prevent scorching, unplug the popper without waiting for this corn to clear the unit. Because a few kernels may continue to pop even after the unit is unplugged, make sure all popping has stopped before removing the container and butter melter.
9. Carefully remove the container using protective mitts.
NOTE: *When popcorn remains in the chamber after popping and has not discharged, it is caused by variances in popcorn type, freshness, moisture content, or household current.*
