

ARTSCAPE[®]

WINDOW FILM DESIGN

Care Guide

- >> To assure the product adheres to window, we recommend the outside temperature be above 40°F for the application process.
- >> Artscape films will tile together when factory edges are matched top to bottom or side to side. Each sheet is one full repeat. During application, squeegee towards the seam.
- >> Not recommended for use in light fixtures or near any artificial heat source.
- >> Film can be cleaned using any mild household window cleaner.
- >> This product is intended for decorative purposes and to provide privacy. As with all color pigments it may, in time, fade.
- >> Some window manufacturers' warranties are void when window film is applied. Window film does not break glass. However, it can reveal or accelerate an inherent defect that is in the glass. Occurrences of breakage are rare.
