

INDUCTION TECHNOLOGY

POWER, SPEED & PRECISION WITH INDUCTION

Induction technology uses electromagnetic energy to heat only your cookware for safer, more energy-efficient cooking and easy cleanup.

FASTER HEATING

- Quicker, more responsive heating than radiant electric and gas
- Boil water up to 40% faster*

PRECISION HEATING

- Heats cookware directly and evenly with greater precision and no wasted heat
- About 5-10% more energy efficient than radiant electric and up to 3x more than gas**

SAFER HEATING

- Heats only your cookware, while the cooktop stays cool
- Reduces risk of fire and burns and allows for easier cleanup

KEY FEATURES

POWER BOOST MODE

Activate Boost mode to temporarily maximize an element's power output to quickly boil large pots of water.

SIMMER KEY

Conveniently achieve the perfect simmer for soups, sauces, stews and more with just a tap.

AUTOMATIC COOKWARE DETECTION

Elements activate only when induction compatible cookware is correctly placed within the cooking zone.

COOKWARE COMPATIBILITY INDICATOR

Rates cookware and element compatibility on a scale from 0 to 10 to help you optimize the performance and energy efficiency of each element.

*According to Consumer Reports testing. **According to ENERGYSTAR.gov.
